System Features

With an uneven muddled speaker coverage across the sanctuary, Gateway was in need of an audio upgrade. They found a solution that now allows their praise band and team to crank up the sound and “rock the house!”

- Installed are 15 light-weight, two-way 12” line array speakers, which are flown above the front of the stage, along with 8” line arrays that were placed at the front edge of the stage for front fills
- Next to the center line arrays, there are 8 high-powered subwoofers that assist in providing sound clarity to the congregation
- Amplifiers and a digital signal processor finish out the audio system that now allows full, even coverage over the 2000-seat sanctuary
